## **Overview**

Push Messages Web Part is intended to enable communication with the users of SharePoint web site by sending push messages to their mobile devices.

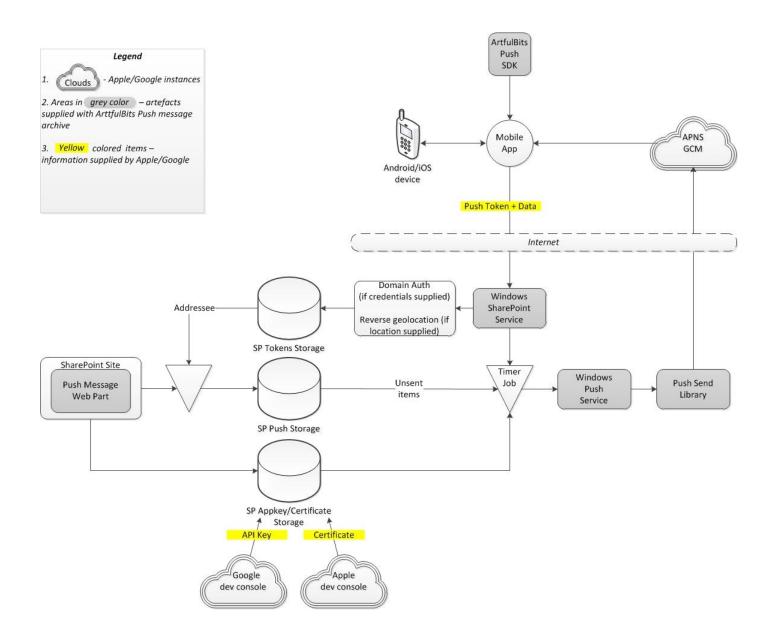

This powerful tool has no limits in regards to the message quantity. The messages are easily created, and automatically stored after sending.

Also, this tool allows for creating the groups of the users based on certain characteristics, like platform type, device location, or your own preferences. The messages can be sent to either the individual users, groups, or even a combination of groups and users.

Simply stated, Push Message Web Part is a compound solution that consist of the few important parts:

- Web Part and infrastructure
- Push Send Library
- 2 services
- Push SDK

The following schematic diagram explains the connection between all parts:

Certainly we presume that your mobile application is either already developed, or is going to be developed soon.

However, please, remember, that WE CAN ALSO HELP TO DEVELOP YOUR MOBILE APPLICATION!

#### **Feature List**

Send messages to individual users and/or groups	✓/	<b>~</b>
History of messages	✓/	✓
Status of messages		
Language pack support (desired localization can be added by request)	✓	✓

## Why ArtfulBits Push Message?

Mobile devices have become a necessary target for online marketing and successful team collaboration. You can deliver news and get the feedbacks from your users exponentially faster if you reach them on the mobile devices.

Push Message Web Part is full-cycle solution that contains every part necessary for reaching your SharePoint users on their mobile devices. It contains SharePoint web part itself, iOS and Android SDK for your application that will enable your application to communicate with Push Web Part, web services that will actually send data back and forth, and certainly an extensive and easy to understand documentation for each part.

Push Message Web Part has all capacities to become your greatest assistant. Just imagine what you can do with it inform your customers about your new products, send messages to your team, schedule marketing campaign notifications, and congratulate your staff and much more!

## **How to Use**

It is very important to deploy properly all parts of the solution:

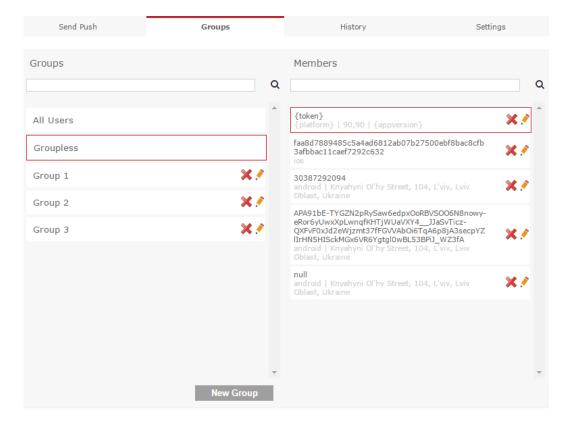

- Web Part (check Installation Guide for the detailed instructions)
- Push Send Library (it goes with the web part, and doesn't require any additional efforts to be installed)
- 2 services (please see instructions below)
- Push SDK (check <u>Push Message iOS SDK Integration.pdf</u> and

Push Message Android SDK Integration.pdf for the detailed instructions)

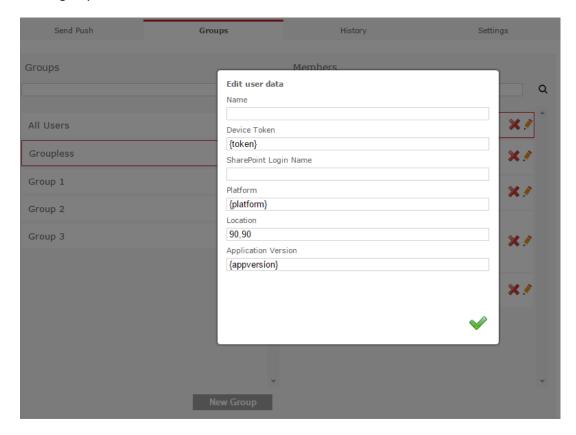

After deployment, new user push tokens received from the devices of the users will be stored in SP tokens storage:

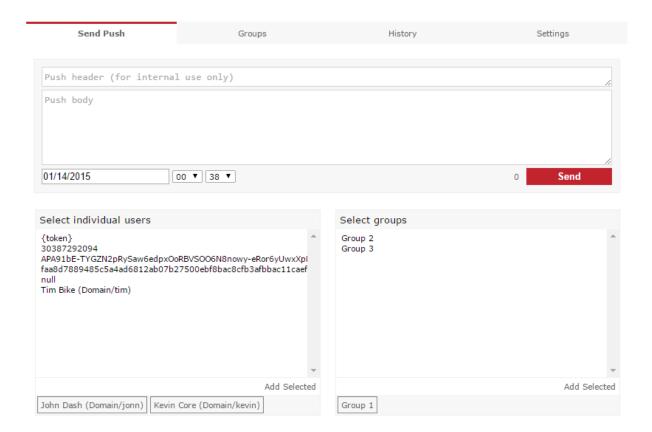

Some additional information can be received along with the token - device platform, location and SharePoint authentication. Also, it is possible to edit each user's data at the Groups area:

SharePoint login name can be added, as well as the displayed name in the Push Message users list. At the same area a new group can be created.

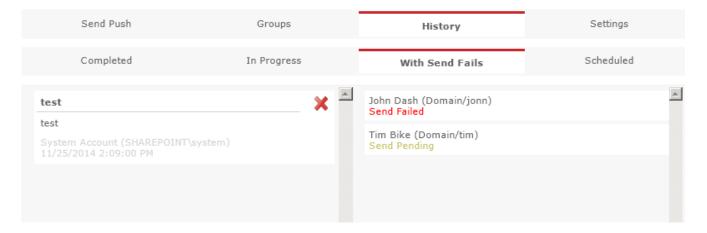

Finally, a new message can be composed very easily. Just select users and/or groups you'd like to send the message to, compose the message, add the header and choose the date and time, if you'd like to schedule your message.

"History" area (Push Storage) shows you all the deliveries and its statuses.

- Completed: all push messages are delivered successfully.
- In Progress: all deliveries that are in progress right now.
- With Send Fails: deliveries that have some messages not delivered (IOS/Android settings are incorrect, user token is incorrect, message is too long, etc.). Extended log is recorded into "PushQueue" list on the current site.
- Scheduled: deliveries that should be sent in the future.

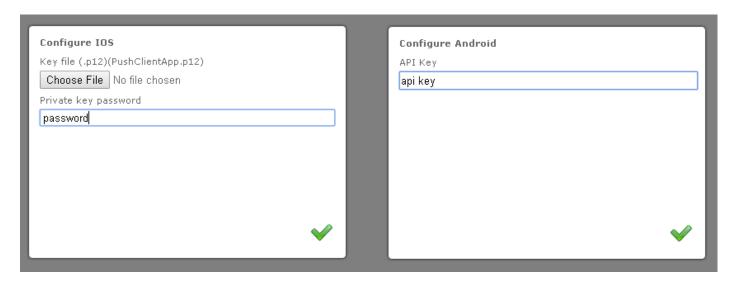

#### **Services**

Follow **Installation Guide** to install and configure the package. It also contains the prompts for creating Push Web Part site and install two additional services - Windows SharePoint service and Windows Push Service. <u>Ensure that both services are running</u>, otherwise the push deliveries won't happen!

For installing ArtfulBits Push SDK, please, read <a href="Push\_Message\_iOS\_SDK\_Integration.pdf">Push\_Message\_iOS\_SDK\_Integration.pdf</a> and <a href="Push\_Message\_Android\_SDK\_Integration.pdf">Push\_Message\_Android\_SDK\_Integration.pdf</a>

## **Connection with Push Servers**

Navigate to "Settings" screen and configure all the necessary settings.

For Android you'll need to provide API key that is generated on Android developer panel for your application.

For iOS you'll need to provide SSL certificate along with the private key password.

Please, check for the detailed instructions on generating those here:

Push Message iOS SDK Integration.pdf

Push Message Android SDK Integration.pdf

**Note:** If something goes wrong, try searching standard SharePoint logs for "ArtfulBits Web Parts" "Push.Service" or "PushMessage" keywords to find out possible reasons of the incorrect behavior.

## See Also

#### **Cascaded Lookup Column**

Cascaded Lookup Column allows building relationship between parent and child columns, the data selected in one field will determine the options presented in another.

#### **Category Column**
